If it is determined that the image output apparatus does not have the trimming image output function, the image input apparatus does not display an item related to the trimming image output function on the UI screen, or displays the item as an unselectable item.~~

Abstract of the Disclosure

An image input apparatus is capable of directly transmitting a digital image to an image output apparatus. The image input apparatus includes an obtaining unit, a user interface selector and a display unit. The obtaining unit obtains from the image output apparatus, capability information including information related to an image outputting function of the image output apparatus. The user interface selector selects, based on the capability information obtained by the obtaining unit, a user interface for controlling the image output apparatus. The display unit displays the selected user interface.
